SUMMARY

Data Engineering and AI-focused Software Engineer with experience in machine learning, data preprocessing, pipeline automation, server security, and production-level system recovery. Skilled in Python, ML model development, web systems, cybersecurity, and cloud deployment. Proven ability to manage projects, build data tools, automate workflows, and strengthen system reliability in startup environments.

TECHNICAL SKILLS

- **Languages:** Python, SQL, R, JavaScript, Java, HTML/CSS.
- **Data Engineering:** ETL/ELT Pipelines, Data Cleaning & Preprocessing (Pandas), Data Modeling.
- **Machine Learning:** TensorFlow/Keras, Scikit-learn, OpenCV, NumPy, Predictive Modeling, Generative AI (Prompt Engineering),
- **Web & Cloud:** Flask, React.js, Linux Server Deployment, Environment Management, GDS API Integration, REST APIs, Git/GitHub.
- **Tools & Visualization:** Power BI, Excel, Linux (Ubuntu), Cloudflare, phpMyAdmin.

WORK EXPERIENCE

Software Engineer (AI, Data Systems & Security), Roaming Tours & Travels June 2025 - Present

- **Web System & API Integration (OTA Software Platform Project Role):**
 - **Project Management:** Managed workflow structuring and task prioritization, overseeing the technical lifecycle from feature planning to progress reporting.
 - **Backend API Integration:** Developed the core logic for air ticket search and booking by integrating complex GDS APIs, ensuring **real-time data consistency** between the OTA platform and airline databases.
 - **Process Automation:** Built an Automated Itinerary Generator using JavaScript, reducing manual itinerary creation time by **80%** and enabling instant branded document generation.
- **Data Process Automation:**
 - Designed a dynamic Google Sheets dashboard to ingest and clean unstructured sales data using advanced formulas. Streamlined the weekly reporting workflow, reducing manual data entry and report making time by **5+ hours of manual work per week**.
- **Cybersecurity & System Recovery:**
 - Orchestrated disaster recovery after a critical SQL Injection attack, restoring the full production system from backups with minimal downtime.
 - Reduced attack surface by **90%+** by implementing Cloudflare against DDoS attacks, enforcing strict UFW firewall rules, and conducting routine Nmap/SSH audits.
- **Advanced Prototyping & AI Initiatives:**
 - **OCR Automation:** Prototyped a document scanner to extract and validate structured data from visa documents.
 - **GenAI Integration:** Designed the logic for an AI-powered chatbot to automate itinerary creation.

PROJECTS

Bangla Handwriting Age & Gender Prediction (Thesis) ([Link](#)) | Deep Learning / TensorFlow:

- **Data Engineering (Nationwide Collection):** Orchestrated a root-level data collection campaign across Bangladesh, gathering 6,000+ samples from diverse age demographics and districts. Engineered a segmentation pipeline to expand this raw dataset into **576,000+ individual characters** and **18,000 unique text strings**.
- **Computer Vision Pipeline:** Built an automated Python ETL script using **OpenCV** and **PIL** for noise reduction, normalization, and contour detection to transform raw images into structured tensors.
- **Model Benchmarking:** Evaluated performance across multiple architectures (VGG-16, MobileNet, LeNet-5) vs. a custom "AksharPorichoy" model (**fine-tuned on ResNet50V2**). Achieved peak accuracy of **78.34%** (Gender) and **77.14%** (Age), outperforming standard CNN baselines.

Real-Time Weather Monitoring Tool ([Link](#)):

- **API Integration:** Engineered a Python script to ingest live meteorological data from the **METAR API**, utilizing `urllib` to parse complex raw data strings into structured metrics.
- **Data Visualization:** Developed a **Tkinter-based desktop GUI** to visualize dynamic wind vectors and weather conditions, providing real-time updates and summaries for end-users.

EDUCATION

BRAC University — B.Sc. in Computer Science & Engineering
Dhaka City College — HSC (Science),
Faizur Rahman Ideal Institute — SSC (Science),

CERTIFICATIONS

Data Science and Machine Learning with Python BITM

66-hour hands-on training Nov 23 – Jan 24

Focused on data analysis, visualization and machine learning with Python (Pandas, Scikit-learn, Matplotlib), includes practical projects for real-world applications, preparing for data-driven decision-making in business contexts.
